

Statement Congratulating South Korean President Kim Dae-jung on Winning Nobel Peace Prize

October 13, 2000

I congratulate President Kim Dae-jung on his selection as the winner of this year's Nobel Peace Prize. I can think of few leaders who have done so much over so many years to earn this honor. It is a fitting tribute to his courage in promoting peace and reconciliation on the Korean Peninsula and to his lifelong dedication to the principle that peace depends on respect for human rights.

This Prize not only celebrates what President Kim has accomplished; it inspires those of us who cherish peace and freedom to help him realize his vision. Since his historic summit with Chairman Kim Chong-il, prospects for a better future on the Korean Peninsula have risen greatly. The American people will stand with the people of Korea until the sunshine of peace and freedom illuminates the entire Korean Peninsula.

Statement on Action To Support the Third Generation of Wireless Technology

October 13, 2000

Today I am pleased to sign an executive memorandum that will help ensure that America maintains its leadership in two of the most important technologies driving the U.S. economy—wireless telecommunications and the Internet. I am directing Federal agencies to work with the Federal Communications Commission and the private sector to identify the radio spectrum needed for the “third generation” of wireless technology. These so-called 3G systems will allow Americans to have mobile, high-speed access to the Internet and new telecommunications services anytime, anywhere.

My administration is committed to strengthening U.S. leadership in the information and communications industry. Over the last 5 years, the information technology sector has accounted for nearly one-third of U.S. economic growth and has generated jobs that pay 85 percent more than the private sector average. The action I am taking today will

help U.S. high-tech entrepreneurs compete and win in the global marketplace. It also will allow consumers to enjoy a wide range of new wireless tools and technologies, such as handheld devices that combine services like a phone, a computer, a pager, a radio, a customized newspaper, a GPS locator, and a credit card.

I am confident that Federal agencies, working with the private sector, can develop a plan for identifying the spectrum that will meet the needs of the wireless industry and is fully consistent with national security and public safety concerns. As made clear in a report released today by my Council of Economic Advisers, time is of the essence. If the United States does not move quickly to allocate this spectrum, there is a danger that the U.S. could lose market share in the industries of the 21st century. If we do this right, it will help ensure continued economic growth, the creation of new high-tech jobs, and the creation of exciting new Internet and telecommunications services.

Memorandum on Advanced Mobile Communications/Third Generation Wireless Systems

October 13, 2000

Memorandum for the Heads of Executive Departments and Agencies

Subject: Advanced Mobile Communications/Third Generation Wireless Systems

The United States and the rest of the world are on the verge of a new generation of personal mobile communications, as wireless phones become portable high-speed Internet connections. The United States Government must move quickly and purposefully so that consumers, industry, and Government agencies all reap the benefits of this third generation of wireless products and services.

In less than 20 years, the U.S. wireless industry has blossomed from virtually nothing to one with 100 million subscribers, and it continues to grow at a rate of 25 to 30 percent annually. Globally, there are over 470 million wireless subscribers, a number expected to grow to approximately 1.3 billion within the next 5 years. It is an industry in
